

ST MICHAEL'S CHURCH, SEAVINGTON ST MICHAEL

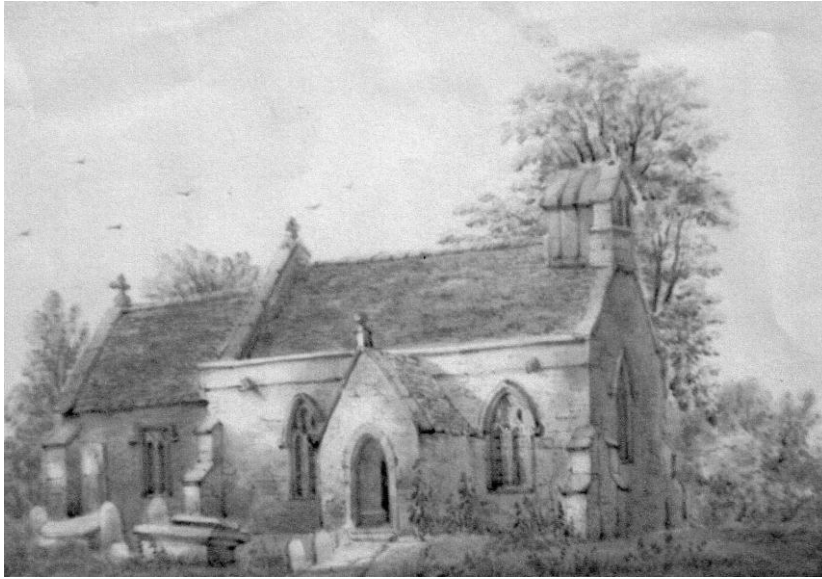

Plate 1. The chancel and east end of the nave after excavation, showing the revealed foundations and grave outlines. Scales 1metre.

Plate 2. The surviving area of primary floors in the west end of the nave. The white lime mortar of the primary floor lies above the clay subsoil and is overlain by laminated earth surfaces, locally very reddened by the heat from the furnace pit. The scale (0.30m) stands against a section of the infill of this pit. View from the north-east.

Plate 3. Sequence of floors and graves K excavated in the west end of the nave. The scale (0.30m) lies on top of the primary floors. Beyond is the lime mortar patching (24) above a sequence of graves. View from the south-east.

Plate 1. The chancel and east end of the nave after excavation, showing the revealed foundations and grave outlines. Scales 1metre.
